

The new Ver.1.1 AMSR2 brightness temperature product was released.

AMSR2 brightness temperature products released on January 25, 2013

(Version 1.0) have been updated on March 1, 2013.

The revised version is Version 1.1.

The major modifications have been made to following procedures.:

1. Correction of Cold Sky Antenna Temperature for 6.9 GHz V/H channel and 7.3 GHz V/H channel
 2. Correction of Hot Load Brightness Temperature for all channels
 3. Antenna Pattern Correction coefficient for all channels
 4. Check of Calibration Data for all channels
- Since this procedure does nothing other than setting flag of "HTS/CSM Difference Limit Check" in Scan Data Quality, it has no impact on brightness temperature.
